

## REVIEWS ON THE MANUSCRIPT [22-2]

### Reviewer 1

The presented manuscript after resubmission was significantly updated and adjusted.

In spite of the fact that I reserve several concerns connected with the comparison of theory and experiment, I support the acceptance of the submission mainly due to interesting experimental results.

The acceptance shall be conditioned on improvement of the language used – I suggest to the author to ask a skilled English speaker to go through the paper and correct misspellings, improperly used words as well as phrasing.

### Reviewer 2

Author has added appropriate theoretical explanation of his view on this phenomenon.

I am satisfied with new version of this manuscript.

### Editorial request

**Template:** The current template is not one of the book. Please transfer the entire manuscript to the necessary template when revising the article: [http://iypt.org/File:YPT\\_papers\\_Template.doc](http://iypt.org/File:YPT_papers_Template.doc). Please do not list figures separately in the end of the manuscript and do not split the manuscript into several separate files.

**Dedication:** Please do not leave the dedication as a stand-alone phrase ahead the Introduction, but frame it into a separate chapter titled *Dedication*. It may be suggested to place this chapter at the end of the manuscript, which is a common practice elsewhere.

**Images:** Are Figures 6 and 7 entirely of own work? If not, please provide references.
